

Training Window Installation

Rapid Assault Tools is proud to have been selected to supply all of the training windows in the new Metropolitan Police Department's (MPD) Tactical Training Facility located in Washington, DC.

The RatWindow™ allows for repeated window entries without the cost, clean up and hazards of conventional training windows. This innovative training device reinforces the break and rake entry method but greatly reduces the risks of broken glass in training area.

The operator first "breaks" the reusable window in. Next, the student must rake out the "shards" before making entry. After entry is made, the reusable window and shards are returned quickly and easily to their original position awaiting the next scenario.

Rapid Assault Tools offers several window sizes or will custom engineer windows for your existing dwelling. This window can also be used with a free standing leg kit for temporary installations.
