

## Folding Inspection Mirror

Lightweight search mirror has an 8-inch convex mirror that easily articulates on the tri-wheeled base. Tri-wheel base is excellent for a full range of motion unlike conventional mirrors with 2-wheel back and forth motion.

Telescoping shaft is 24-inches in the closed position and extends to 46-inches in the fully open position giving you a long reach. Posi-lock adjustment (A) allows shaft angle to be adjusted as needed. Shaft removes easily from handle assembly (B) making the mirror available for hand use.

Optional LED light fastened to mirror gives direct light on inspection area which is far superior to shaft mounted lights.
