

## **X-RatRake**

Innovative telescoping window breaker for real world use. This compact tool quickly and easily extends for full power break and rake operations. The Tungsten Carbide tip is perfect for shattering a variety of glass types including laminated automotive glass. After the initial hole is made in the glass, the square raking section allows the user to rake out the remaining glass shards. The user's hands are protected from the breaking glass and other dangerous objects by a 4-inch diameter plastic hand guard.

The tool is normally carried in the closed and locked position. To use, the user depresses two buttons and pulls the lower tube out until it automatically locks into position. To close, the user depresses the same buttons and slides the lower tube back into the closes position.

### **Dimensions:**

- 22" closed position
- 32" open position
- 4" diameter hand guard
- 4 lbs. weight

**Part Number: WBRX30**
