

Train RAT™

Industry's first air powered entry tool to quickly, quietly and reliably open passenger train doors!

Introducing the TRAIN Rat™. This innovative entry tool allows one operator to defeat a locked sliding door in seconds. The patent pending tool features extra long blades to "dig" door out from its pocket. Once the tool is fully engaged in the door, operator activates tool with a press of a button. Center blade extends instantly pushing door open. High pressure air provides nine inches of travel to fully defeat door mechanism. Tool automatically retracts and is ready for another breach if necessary.

Tool uses readily available compressed air tanks from the paint-ball industry. Operator simply screws air tank into tool and it is ready for use. No tools required. Safety valve at air tank adds another layer of safety. Chrome plated for long service life. Made in the USA. Patent Pending.

Specifications:

Length:	30"	Travel:	9"
Weight:	22 lbs.	Spreading force:	1,000 lbs.
Blade width:	5"	Ram return:	Automatic
Blade depth:	6"
