

Pry RatDoor™

The innovative Pry RatDoor™ is an outward opening door that allows for continued prybar breaches without the high cost of specialized consumables. This high quality training door is the most realistic pry door on the market. Unlike other training doors, the operator inserts the prybar (Hallagan bar) directly into the door/frame gap. The unique patent-pending jamb section deflects as the operator pries the door open. After a realistic forced entry is made, the door can be immediately reset for next training scenario.

No consumables are required!

The door is constructed of structural steel and measures 80" x 32". The frame is also fabricated from structural steel and measures 80" x 40". 16 gauge steel skin is welded to door frame for superior durability and rigidity. Made in the USA and powder coated for long life.

Catalog #:	Description
TD8036P-FS	Pry RatDoor Free-Standing (Includes leg kit)
TD8036P-BI	Pry RatDoor Built-In (Mounting tabs on side of door frame)
