

Ram RatDoor™

The innovative, adjustable Ram RatDoor™ allows for continual forced entry training without the high costs associated with specialized consumables.

The Ram version of the TD8036 is an inward opening door that can be used free-standing or installed into a structure. The door itself is constructed of structural steel and measures 78" x 34". The frame is also fabricated from structural steel and measures 80" x 40". 16 gauge steel skin is welded to door for superior durability and rigidity. A 3/8" thick steel strike plate allows for continued battering ram hits.

Door uses low cost, pine wood inserts to create realistic breach resistance. These inserts load into the door without any tools. Also, by adjusting the shear locks (no tools needed), the **amount of breach resistance can be changed!** Operators can simulate residential, industrial and reinforced (failed breach) door breaches with the same door and same inserts! The wood inserts can be purchased from Rapid Assault Tools or sourced from a local lumber yard and cut to length.

Catalog #:	Description
TD8036R-FS	Ram RatDoor Free-Standing (Includes leg kit)
TD8036R-BI	Ram RatDoor Built-In (Mounting tabs on side of door frame)
TD8036R-WI	Wood frame breaching inserts (100 inserts / box)
