

RatWindow™

Rapid Assault Tools introduces the finest training window available!

Train for window entries without the cost, clean up or hazards that glass windows cause. The window frame is constructed of high strength powder coated steel and the panel is made from nearly indestructible Lexan®. The RatWindow is designed and manufactured to your window size allowing for perfect fit.

To use this training aid, the operator first “breaks” the window. The plastic window panel falls to the ground. Next the user must “rake” out the steel shards allowing for a safe entry. After entry is made, the shards and reusable “glass” are easily returned to their original position awaiting the next scenario. Some of the benefits associated with the RatWindow are: no replacement glass, no glass fragments, no down time. Window can be installed into your facility, used free standing with optional leg kit or wall panel.

For applications where real glass is required, we offer a training window designed to accommodate single use glass panes.

RatWindow™

Product Offerings	
Description	Part #
Permanent Install Training Window	TW4840
Free Standing Training Window	TW4840-FS
Free Standing with brick facade	TW4840-WALL
For use with glass panels	TW4840-GLASS
